After the addition was completed, the reaction mixture was stirred for 10 minutes at the same temperature, and then acetic acid (46.4 ml) was added dropwise to neutralize the solution during a period of 1.5 hours. After stirring for half an hour, 37% aqueous formaldehyde (77.4 ml) was added in one portion and sodium cyanoborohydride (55.4 g) was added in several portions at room temperature during a period of 2 hours. The solution was always adjusted to pH 7 with acetic acid. After being stirred for additional 2 hours at the same temperature, the solvent was evaporated under reduced pressure and the residue was partitioned between dichloromethane and an aqueous solution saturated with sodium bicarbonate. The aqueous layer was extracted twice with dichloromethane. The combined organic layers were

washed with an aqueous solution saturated with sodium bicarbonate and brine successively, and dried over anhydrous sodium sulfate. The solution was concentrated in vacuo and the residue was purified by column chromatography on silica gel (dichloromethane:methanol = 100:1.5 - 100:5 as eluent) to give a solid which was recrystallized from ethyl acetate to provide 6-(4-fluorophenyl)-4-methyl-7-(pyridin-4-yl)-1,2,3,4-tetrahydroimidazo[1,2-b][1,2,4]triazine (2.14 g).

## FURTHER INFORMATION CONTINUED FROM THE SECOND SHEET

**V.  OBSERVATION WHERE CERTAIN CLAIMS WERE FOUND IN SEARCHABLE<sup>1</sup> INCOMPLETELY**

This International search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1.  Claim numbers 8 because they relate to subject matter not required to be searched by this Authority, namely:

**Remark:** Although claim 8 is directed to a method of treatment of (diagnostic method practised on) the human/animal body the search has been carried out and based on the alleged effects of the compound/composition.

2.  Claim numbers because they relate to parts of the International application that do not comply with the prescribed requirements to such an extent that no meaningful International search can be carried out, specifically:

3.  Claim numbers because they are dependent claims and are not drafted in accordance with the second and third sentences of PCT Rule 6.4(a).

**VI.  OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING<sup>2</sup>**

This International Searching Authority found multiple Inventions in this International application as follows:

- As all required additional search fees were timely paid by the applicant, this International search report covers all searchable claims of the International application.
- As only some of the required additional search fees were timely paid by the applicant, this International search report covers only those claims of the International application for which fees were paid, specifically claims:
- No required additional search fees were timely paid by the applicant. Consequently, this International search report is restricted to the invention first mentioned in the claims; it is covered by claim numbers:
- As all searchable claims could be searched without effort justifying an additional fee, the International Searching Authority did not invite payment of any additional fee.

**Remark on Protest**

- The additional search fees were accompanied by applicant's protest.
- No protest accompanied the payment of additional search fees.
